C I R C U L A R

In the course of joint inspection of Rail Weigh Bridge in one of the Areas by Vigilance as well as System Department, some deficiencies were noticed in the existing system of maintenance of weigh bridge which needs system improvement.

Following measures are, therefore, required to be implemented to improve/streamline the weighment procedure at various locations of WCL :-

1. All data entry points like floppy drive, CD-ROM drive, Pen drive etc. need to be sealed and be opened on need basis with proper entry in relevant register authenticated by signatures of all concerned, recording reasons of reopening.
2. To avoid manipulation, no print file is to be generated in the computer. The respective software must take care of this aspect.
3. All data files need to be encrypted so as to make these tamper proof
4. The time gap between the weighment recording and print out generation should be not more than 15 minutes to avoid any data modification.
